

# TEC University

I.G. Brown Training and Education Center  
McGhee Tyson ANGB, Tenn.

---

TEC University develops and delivers training and educational content to meet the needs of the Air National Guardsman. Each Airman has different educational needs when it comes to learning, and the capabilities of TEC University are here to fill those needs through From the Force, Video Production, Curriculum Development, the Instructor Certification Program, Professional Development, Streaming Services and Conference Support.

[\*From the Force\*](#) is a channel that allows Airmen across the globe to create short videos of best practices they have to get the mission done and share it with their peers. The channel is available on both [YouTube](#) as well as [Vimeo](#) to allow access to those on a NIPR computer.

The [\*Video Production\*](#) team works with customers to create videos to train, educate, and inform the Total Force.

[\*Curriculum Developers\*](#) will analyze and evaluate current instructor materials and provide guidance on how to maximize Airmen's learning needs through educationally sound lesson plans.

The [\*Instructor Certification Program\*](#) prepares Airmen to plan and deliver high quality, educationally sound technical and academic training. Graduates also earn three CCAF credit hours toward Instructor Methodology.

The TEC University team also offers [\*Professional Development\*](#), giving Airmen the skills needed to become effective and efficient leaders in today's Air Force.

TEC University's [\*Streaming Services\*](#) allow large groups of Airmen to receive Professional Development from instructors here all at once. Customers can also use Streaming Services through the TEC University Vimeo Livestream channel to help maximize their audience reach.

Additionally, TEC University provides [\*Audio/Visual Support\*](#) for Air National Guard conferences such as the Domestic Capabilities Priorities conference, the State Partnership Program conference, and the ANG Senior Leadership Conference each year. These services allow the ANG to save about \$20,000 in equipment rental fees per conference.

All of the training and education services TEC University provides are available on non-CAC enabled devices, allowing Airmen to get training and education anytime, anywhere. TEC University can provide learning opportunities here at McGhee Tyson Air National Guard Base in East Tennessee, at home station, or via video streaming services.
